

DISABILITY HISTORY AND THE ANCIENT WORLD
(CA. 3000 BCE - CA. 700 CE)

A BIBLIOGRAPHY

5th version,
January 2017.

Christian Laes

Given the vagueness of the term as well as the ever expanding scholarship on Antiquity, compiling a 'complete' bibliography on disability in the ancient world would prove to be an impossible or at least an herculean task.

This internet publication is therefore only meant as a working tool for scholars in the field. You are kindly invited to send additions or corrections - also offprints are welcomed.

In the present list, some publications concerning later periods have been included, mainly because they are of importance for the study of disability in the ancient world. Needless to say, also this addition is somehow arbitrary.

I am most grateful for the additions and suggestions which have been sent since the publication of the first version. Special thanks are due to Danielle Gourevitch and M. Miles for extensive correspondence on the matter.

This fifth version is enlarged by approximately sixty new publications. More attention has been paid to the world context. Readers will find new entries on Judaism, the Gospels and (early) Islam.
